

monta film 257F, red, is a thermoformable PVC splicing tape with a total thickness of 70my +/- 10%. This product is a unique tape developed specifically for use on thermoformable films in the sector of blister packaging and thermoforming processes.

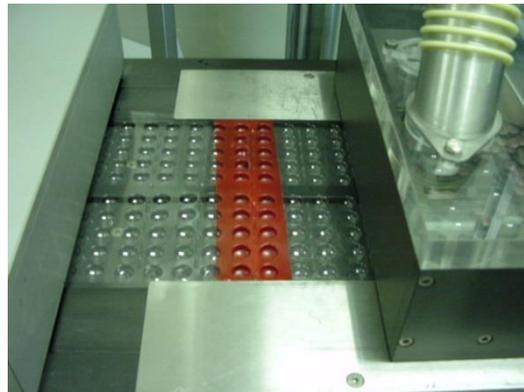

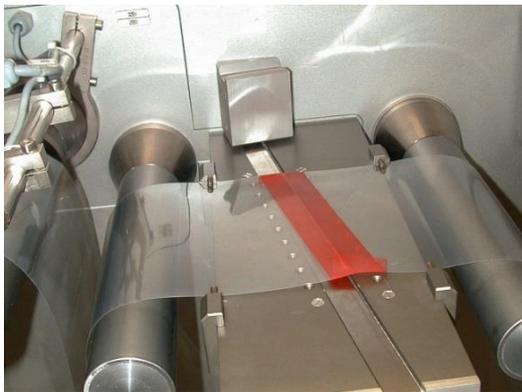

The rigid PVC film is thermoformable and coated with a special transparent natural rubber adhesive that is resistant to moisture, diluted acids and alkalis.

The deep red pigmentation of the backing allows for true and consistent identification of the splice by photoelectric sensors. Furthermore, the tape withstands short exposure to elevated temperatures (up to 80°C) found in blister packaging and thermoforming processes.

monta film 257F is available from stock on monta-core, in the dimensions 66m x 38mm and 66m x 50mm.

Below photos show the application in the pharmaceutical industry.

monta film 257F is exclusively produced by monta Klebebandwerk GmbH.

monta is known for their expertise in packaging technology and for their over 50 years of experience in the industry. Continuous advancements in production, guaranteed quality, and a dedicated team of professionals have been the cornerstones to monta's success. As Germany's largest manufacturer of high-grade adhesive tapes monta is well known for:

- excellent price/performance ratio of our products
- long-term partnerships with certified suppliers
- continuous innovation in our technologies
- proven quality and reliable service

monta Klebebandwerk GmbH is the leading manufacturer of self-adhesive tape with natural rubber adhesive. The product range contains PVC, BOPP, MOPP (strapping), paper and PET self-adhesive tapes in different thicknesses and colors.

Adhesive tapes from monta are manufactured at the Immenstadt location in the south of Germany and are distributed by dealers and converters worldwide with an export-share of 50%. The company employs a total of 130 staff members and produces more than 220 million m² of adhesive tape per year. The fix-pack .companies with locations in Hungary and Romania are part of the monta group.

State-of-the-art production plants, strict quality specifications as well as the highest degree of safety and the certified management system set standards in the packaging industry. monta is certified according to DIN EN ISO 9001, 14001 and 50001.

A devastating fire in April 2015 destroyed a major part of the monta production facilities. Meanwhile monta is fully rebuilt. Next to our high-performance coating equipment, monta has now seven completely new state-of-the-art slitting machines to produce the adhesive tapes for our customers.
